ABOUT ME

Junior QA Engineer with commercial experience testing mobile apps and web platforms. I design and run structured test cases, log defects through to resolution and build automation that has cut test run times by 40 %. My background in C++/OpenGL rendering simulation means I understand how real-time 3D software is built, and where bugs can appear.

EXPERIENCE

3 SIDED CUBE | Junior QA Engineer
May 2026 - Present | Bournemouth

- Planned and delivered functional and regression testing across mobile apps and web platforms on physical devices, recording defects with clear reproduction steps and evidence in Jira.
- Maintained and optimised automated test suites, reducing test run times by 40% and cutting some test flows from 120+ actions to 2-5.
- Prioritised and created test runs with 100+ test cases in Testiny, focusing coverage and automation on critical features and deadlines.

SPYSQUAD HQ | Gameplay Programmer Intern
Nov 2024 - Feb 2025 | Falmouth

- Worked in a multidisciplinary team to develop a point and click puzzle game for youth aged 9+.
- Used Godot and GDScript to program and polish inventory, dialogue, and item based interaction systems.
- Consulted with the project lead to manage project scope and ensure a final product was shipped within the deadline.

PROJECTS

WAYFARERS GUILD | Gameplay, UI, AI Engineer (Grade: 1st)
Sep 2024 – May 2025 | Falmouth University

- Used C# and Unity engine to engineer, optimise and maintain Theta* AI pathfinding, NPC quest and dialogue, and interactive UI systems.
- Used Agile & Scrum to help direct meetings, keep the team organised, track progress, and rescope the project to meet the deadline.

C++ OPENGL CULLING ALGORITHMS | Final Year Dissertation Project (Grade: 1st)
Jan 2025 - May 2025 | Falmouth University

- Used C++ and OpenGL to program three unique graphics culling algorithms in high polygon environments.
- Increased frame rate by approx. 300% when culling algorithms are enabled.
- Statistically analysed and visualised results and findings in an undergraduate research paper.

C++ OPENGL PARTICLE SYSTEM | (Grade: 2:1)
Oct 2024 - Dec 2024 | Falmouth University

- Used C++ and OpenGL to engineer an object oriented particle system.
- Optimised to decrease memory usage over time by 97% and maintained to run without memory leaks
- Object oriented approach ensured clean and efficient code

EDUCATION

FALMOUTH UNIVERSITY
BSc(Hons) Computing for Games
69% (Upper 2nd Class)
2022-2025 | Falmouth, Cornwall
Relevant Modules
Principles of Computing (83%)
Advanced Games Programming (79%)
R&D Dissertation (70%)
Graphics& Simulation (62%)
Computational Mathematics (58%)

LANGUAGES

C#
C++
Python
LaTeX
Unreal Engine Blueprint
GDScript
Javascript

SOFTWARE

Unity (5 years),
Unreal Engine (2 years)
Godot (1 year)

OTHER

Multidisciplinary Teamwork (4 years),
Git & Version Control (4 years),
OpenGL (1 year),
Agile development methodology
Jira
Claude Code

HOBBIES

Karate (11 Years)
Tang Soo Do (3 Years)
Hiking/Walking/Running
Computers, Technology, Gaming
